

Mini Project – Expense Tracker

Project Details / Description:

You are required to build a simple personal finance management tool.
The program should allow the user to:

- Add an expense with details like date, category, description, and amount.
- View all recorded expenses in a clean format.
- Calculate total spending so far.
- Exit the program gracefully when the user chooses to.

All tasks must be implemented using **loops**, **if-else**, **lists**, and **dictionaries** only. No user-defined functions or file handling should be used.

Sample Output:

```
Welcome to Expense Tracker 📅
```

```
===== MENU =====
```

- 1 Add Expense
- 2 View All Expenses
- 3 View Total Spending
- 4 View Spending by Category
- 5 Exit

```
=====
```

```
Enter your choice (1-5): 1
```

```
Enter date (DD-MM-YYYY): 05-11-2025
```

```
Enter category (Food, Travel, Books, Shopping, etc): Shopping
```

Enter short description: Dinner

Enter amount (₹): 550

☒ Expense added successfully!

===== MENU =====

☐ Add Expense

☐ View All Expenses

☐ View Total Spending

☐ View Spending by Category

☐ Exit

=====

Enter your choice (1-5): 3

💰 Total Spending = ₹150

Concept	Purpose
while loop	To repeat the menu until user exits
if-elif-else	To handle menu options
list	To store multiple expenses
dictionary	To store details of each expense
for loop	To display and calculate totals
input() / print()	For user interaction

Project Solution Code

```
# -----
# 💰 EXPENSE TRACKER PROJECT
# -----

expensesList = [] # list of expense dictionary

print("Welcome to Expense Tracker 📁: ")

while True:
    print("===== MENU =====")
    print("❶ Add Expense")
    print("❷ View All Expenses")
    print("❸ View Total Spending")
    print("❹ View Spending by Category")
    print("❺ Exit")

    choice = int(input("Please Enter your choice (1-5): "))

# ❶ Add Expense
    if choice == 1:
        date = input("Enter date (DD-MM-YYYY): ")
        category = input("Enter category (Food, Travel, Books, Shopping): ")
        description = input("Enter short description: ")
        amount = float(input("Enter amount (₹): "))

        expense = {"date": date, "category": category, "description":
description, "amount": amount}

        expensesList.append(expense)
        print("\n✅ DONE bro! Expense added successfully!")

# ❷ View All Expenses
    elif choice == 2:
        if len(expensesList) == 0:
            print("\n⚠ No Expenses recorded yet!")
        else:
            print("\n--- All Expenses ---")
            count = 1
            for e in expensesList:
                print(f"{count}. {e['date']} | {e['category']} |
{e['description']} | ₹{e['amount']}")
                count += 1

# ❸ View Total Spending
    elif choice == 3:
        total = 0
        for e in expensesList:
            total = total + e["amount"]
        print(f"\n💰 Total Spending = ₹{total}")

# ❹ Spending by Category
    elif choice == 4:
        if len(expensesList) == 0:
            print("\n⚠ No expenses recorded yet.")
        else:
```

```
summary = {}
for e in expensesList:
    cat = e["category"]
    if cat in summary:
        summary[cat] += e["amount"]
    else:
        summary[cat] = e["amount"]
print("\n📊 Spending by Category: ")

for cat, amt in summary.items():
    print(f"{cat}: ₹{amt}")

# 5 Exit
elif choice == 5:
    print("\n👋 Dhanyawad for using Expense Tracker! Bye ! 🙏")
    break

else:
    print("❌ SORRY BRO! INVALID CHOICE ! PLEASE ENTER 1 - 5")
```
